

Radioberry-2 Experiment results with built-in CW sidetone.

Radioberry connection drawing.

CN301-Pin10 : **Sidetone output PWM**

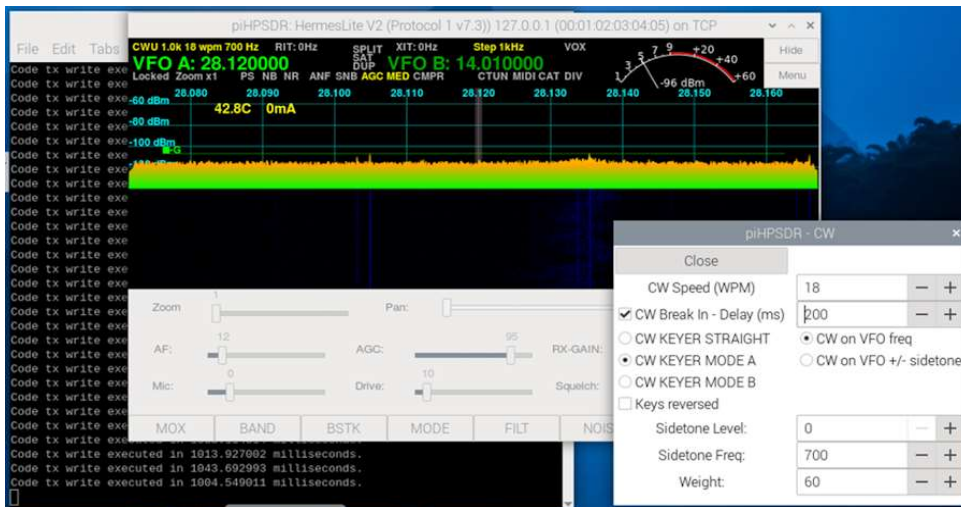

CN301-Pin9 : LED shows Key-down (Not Needed)

CN301-Pin5 : **Puddle (Dash) or Straight key**

CN301-Pin6 : **Puddle (Dot)**

CN301-Pin20 : GND

(1) Sidetone Level = 0, Sidetone Freq. = 700Hz

Sidetone(pwm) output

Sidetone output

$$f_{pwm} = 1/(534\mu s/10) = 18.73\text{kHz}$$

duty = 50%

LPF(CR) output

(2) Sidetone Level = 63, Sidetone Freq. = 700Hz

Sidetone output

LPF(CR) output

sidetone freq = 695Hz
amplitude abt. 1.3V

Close

CW Speed (WPM) 18 -- +

☒ CW Break In - Delay (ms) 200 -- +

☐ CW KEYS STRAIGHT ☒ CW on VFO freq

☒ CW KEYS MODE A ☐ CW on VFO +/- sidetone

☐ CW KEYS MODE B

☐ Keys reversed

Sidetone Level: 63 -- +

Sidetone Freq: 700 -- +

Weight: 60 -- +

(3) Sidetone Level = 127, Sidetone Freq. = 700Hz

Sidetone output

LPF(CR) output

sidetone freq = 695Hz
amplitude abt. 2.0V

Close

CW Speed (WPM) 18 -- +

☒ CW Break In - Delay (ms) 200 -- +

☐ CW KEYS STRAIGHT ☒ CW on VFO freq

☒ CW KEYS MODE A ☐ CW on VFO +/- sidetone

☐ CW KEYS MODE B

☐ Keys reversed

Sidetone Level: 127 -- +

Sidetone Freq: 700 -- +

Weight: 60 -- +

(4) Sidetone Level = 127, Sidetone Freq. = 1000Hz

Sidetone output

LPF(CR) output

sidetone freq = 990Hz
amplitude abt. 2.0V

Close

CW Speed (WPM) 18 -- +

☒ CW Break In - Delay (ms) 200 -- +

☐ CW KEYS STRAIGHT ☒ CW on VFO freq

☒ CW KEYS MODE A ☐ CW on VFO +/- sidetone

☐ CW KEYS MODE B

☐ Keys reversed

Sidetone Level: 127 -- +

Sidetone Freq: 1000 -- +

Weight: 60 -- +

(5) Sidetone output delay

Puddle input ↓ __ ↑

Sidetone output

delay = 21ms
Dot period abt. 66ms (@ 18WPM)
